

Spotly — Project Features & User Roles

Luxury Venue Discovery and Booking Platform

Course: ISS296 — Spring 2026
Instructor: Mr. Amine Ben Hassouna
Team: Cyrine Krichen, Eya Sassi,
Lina Khemiri, Youssef Ben Jemaa

System Roles

Spotly distinguishes four user roles. A user's role is derived at runtime from their account relationship to venues and is never stored as a fixed field.

Role	Description
Guest	An unauthenticated visitor. Guests can browse the landing page, explore the venue discovery page, view individual venue profiles, and scan QR codes to read the digital menu. They cannot make reservations or access any role-specific dashboard.
Client	An authenticated user who holds no venue ownership and is not assigned as staff. Clients can search and filter venues, complete the full booking flow, monitor their reservation status in real time, manage their bookings from their personal dashboard, and submit reviews after a completed visit.
Admin	A user whose email address matches the <code>adminEmail</code> field of a <code>Venue</code> record. The admin has full control over their venue: they configure the floor plan, manage the menu, process reservation requests, moderate guest reviews, generate QR codes, and update venue identity settings. A user becomes an admin by completing the venue onboarding flow after registration.
Staff	A user linked to a venue through a <code>VenueStaff</code> record (assigned by the admin). Staff operate the live floor: they check in arriving guests, record no-shows, create walk-in reservations, and acknowledge waiter calls triggered from tables. Staff can also access the admin area in a read-only operational capacity.

Features

Features **F1–F20** form the core application delivered in Phase 1. Features **F21–F23** are AI-powered additions delivered in Phase 2.

Phase 1 — Core Features

F1 — User Authentication. Covers the full identity lifecycle of a user in the system.

- Register a new account with first name, last name, email and password.

- Log in with existing credentials; session is persisted in local storage.
- Log out and invalidate the current session.

F2 — Venue Discovery and Search. Enables users to find venues that match their interests.

- Browse the full list of available venues.
- Search venues by name using a live search bar.
- Filter venues by activity type using tag pills.

F3 — Venue Public Profile. Presents a venue’s complete identity to any visitor.

- View venue name, description, tagline, location, ambience tags, activities, dress code, and supported languages.
- Browse the venue photo slideshow.
- Read published guest reviews and overall rating.

F4 — Digital Menu. Provides a QR-accessible menu scoped to the guest’s table environment.

- Browse menu items organised by category (starters, mains, desserts, drinks).
- View item name, description, price, allergens, and tags.
- Display only items available in the scanned table’s environment when environment-specific scoping is configured.

F5 — Booking: Environment Selection. First step of the booking flow.

- View all environments configured for the selected venue.
- Select an environment to continue to seat selection.

F6 — Booking: Seat and Table Selection. Second step of the booking flow.

- View the visual floor plan of the selected environment with live table availability derived from existing reservations.
- Select an available table or seat.
- Choose reservation date and time.

F7 — Reservation Submission. Third and final step of the booking flow.

- Fill in reservation details: name, email, phone number, number of guests, and optional notes.
- Submit the reservation request for admin approval.
- A double-submit guard prevents accidental duplicate requests.

F8 — Real-Time Reservation Status Tracking. Keeps the client informed without requiring page refreshes.

- Display an animated timeline: Submitted → Under Review → Decision.
- Receive live status updates via cross-tab storage events the moment the admin acts.
- Automatically navigate to the client dashboard on approval or rejection.

F9 — Client Dashboard and Reservation Management. Gives the client a personal space to manage their activity.

- View upcoming confirmed reservations.
- View past reservation history.
- Cancel a reservation that is still in a pending or confirmed state.

F10 — Guest Review Submission. Allows clients to share their experience after a visit.

- Submit a star rating (1–5) and written review for a completed reservation.
- Review is immediately visible on the venue public profile.

F11 — Admin Venue Onboarding. Guides a new admin through the minimum setup required before accessing the full admin panel.

- Enter the venue name and core identity details.
- Create at least one environment to unlock the admin dashboard.

F12 — Admin Dashboard and Overview. Central hub for the admin after onboarding.

- View key statistics: total reservations, pending requests, revenue indicators.
- Navigate to all venue management sections via the admin sidebar.
- Dynamic time-of-day greeting personalised to the admin.

F13 — Floor Plan Builder. Visual editor for configuring environments and table layouts.

- Create, rename, and delete environments.
- Define canvas dimensions (width and height) and environment shape.
- Add table and seat elements to the canvas; drag to reposition and resize.
- Set element label, capacity, shape, and rotation.
- Add non-seating decor elements.
- Delete elements with a constraint warning when active reservations exist.

F14 — Menu Management. Full CRUD control over the venue’s menu.

- Add, edit, and delete menu items.
- Toggle item availability (visible or hidden on the digital menu).

- Assign items to specific environments or make them venue-wide.
- Organise items by category: starters, mains, desserts, or drinks.

F15 — Reservation Queue Management. Admin workflow for processing incoming reservation requests.

- View all reservation requests with their current status.
- Filter by status (pending, confirmed, rejected, cancelled), date, and environment.
- Approve a reservation, changing its status to Confirmed.
- Reject a reservation with a confirmation dialog.

F16 — Guest Review Management. Admin-side moderation of guest reviews.

- View all guest reviews submitted for the venue.
- Hide a review so it no longer appears on the public profile.
- Restore a previously hidden review.

F17 — QR Code Generation. Produces scannable codes that link guests directly to the digital menu.

- Generate a QR code for each table element in each environment.
- Display a preview and provide a download option.

F18 — Venue Identity and Settings. Comprehensive editor for the venue's public-facing identity.

- Edit name, tagline, description, location, and venue type.
- Manage ambience tags, activities, dress code, and supported languages.
- Upload, reorder, and remove gallery photos for the hero slideshow.
- Configure opening hours per environment.

F19 — Staff Operations Dashboard. Real-time floor management interface for on-shift staff.

- View the live floor map for a selected shift date and environment.
- Check in an arriving guest and update reservation status to Checked-In.
- Mark a non-arriving guest as No-Show.
- Check out a departing guest and mark reservation as Completed.
- Create an instant walk-in reservation for unbooked guests.

F20 — Waiter Call System. Real-time table-to-staff signalling mechanism.

- Trigger a waiter call from the digital menu page at any table.
- Staff dashboard receives live call alerts via cross-tab storage events.

- Staff acknowledges and dismisses calls from the floor map.

Phase 2 — AI-Powered Features

F21 — AI Voice Booking. Removes form friction by letting clients speak their reservation intent.

- Tap a microphone button on the home page and speak a natural language reservation request.
- AI extracts booking intent (venue, date, time, guest count, notes) and pre-fills the confirmation form.
- Navigate directly to the confirmation step with all fields ready.

F22 — AI Semantic Venue Discovery. Alternative discovery mode driven by natural language description.

- Switch to Describe mode on the home page.
- Type a free-text description of the desired atmosphere or occasion.
- AI ranks matching venues by semantic relevance and shows a one-line reason per match.

F23 — AI Reservation Insights. On-demand analytical observations for venue administrators.

- Click Generate on the admin dashboard to send aggregated reservation statistics to the AI.
- Receive 3–5 actionable insights about booking patterns, peak hours, no-show rates, and cancellation trends.
- Insights are displayed with severity indicators (info, warning, success).

Feature–Role Involvement Matrix

ID	Feature	Guest	Client	Admin	Staff
F1	User Authentication				
F2	Venue Discovery and Search				
F3	Venue Public Profile				
F4	Digital Menu				
F5	Booking: Environment Selection				
F6	Booking: Seat and Table Selection				
F7	Reservation Submission				
F8	Real-Time Status Tracking				
F9	Client Dashboard
