

Spotly — Project Scenarios

Luxury Venue Discovery and Booking Platform

Course: ISS296 — Spring 2026
Instructor: Mr. Amine Ben Hassouna
Team: Cyrine Krichen, Eya Sassi,
Lina Khemiri, Youssef Ben Jemaa

This document presents the main use case scenarios of the Spotly platform. Each scenario is assigned an identifier (S1, S2, ...) and is broken down into numbered steps (Sn.1, Sn.2, ...). For each step the involved **user role** and the relevant **feature ID(s)** from the Features & Roles document are indicated.

Scenarios S1–S8 cover the core Phase 1 features. Scenarios S9–S11 cover the AI-powered Phase 2 features.

Phase 1 Scenarios

S1 — Guest Explores the Platform Without an Account

Actor: Guest **Goal:** Discover available venues and browse the digital menu without registering.

Step	Description	Role	Features
S1.1	Guest opens the application and lands on the landing page.	Guest	F2
S1.2	Guest clicks <i>Explore Venues</i> and navigates to the home page without logging in.	Guest	F2
S1.3	Guest browses the venue list and applies an activity filter.	Guest	F2
S1.4	Guest clicks a venue card to open its public profile.	Guest	F3
S1.5	Guest reads venue details, browses the photo slideshow, and views guest reviews.	Guest	F3
S1.6	Guest scans a QR code at the venue and views the digital menu for their table.	Guest	F4

S2 — New Client Registers and Completes a Booking

Actor: Client **Goal:** Create an account and submit a table reservation at a chosen venue.

Step	Description	Role	Features
S2.1	Guest clicks <i>Get Started</i> on the landing page and is redirected to the authentication page.	Guest	F1
S2.2	Guest fills in first name, last name, email, and password, then clicks <i>Register</i> . A session is created and the user is redirected to the home page as a Client.	Guest → Client	F1
S2.3	Client searches for a venue by name using the search bar.	Client	F2
S2.4	Client opens the venue profile page.	Client	F3
S2.5	Client clicks <i>Book a Table</i> to start the booking flow.	Client	F5
S2.6	Client views available environments and selects one.	Client	F5
S2.7	Client views the floor plan, picks an available table, and selects a date and time.	Client	F6
S2.8	Client fills in guest details (name, email, phone, number of guests, optional notes) and clicks <i>Submit Reservation</i> .	Client	F7
S2.9	Client is redirected to the awaiting screen showing the animated status timeline.	Client	F8

S3 — Admin Processes a Reservation Request

Actor: Admin and Client **Goal:** Admin approves a pending reservation; client is notified in real time.

Step	Description	Role	Features
S3.1	Admin logs in with their credentials and is redirected to the admin dashboard.	Admin	F1, F12
S3.2	Admin notices a pending reservation count on the dashboard and navigates to the reservation queue.	Admin	F12, F15
S3.3	Admin reads the reservation details: guest name, date, time, environment, table, and number of guests.	Admin	F15

S3.4	Admin clicks <i>Approve</i> ; the reservation status changes to APPROVED and a log entry is created.	Admin	F15
S3.5	The client's awaiting screen detects the status change via the cross-tab storage event and the timeline advances to <i>Approved</i> without a page refresh.	Client	F8
S3.6	Client is automatically redirected to the client dashboard.	Client	F8, F9

S4 — Client Manages Their Reservations and Leaves a Review

Actor: Client **Goal:** Cancel an upcoming reservation and submit a review for a past visit.

Step	Description	Role	Features
S4.1	Client logs in and opens the client dashboard.	Client	F1, F9
S4.2	Client views their upcoming reservations list.	Client	F9
S4.3	Client clicks <i>Cancel</i> on a pending reservation; a confirmation dialog appears.	Client	F9
S4.4	Client confirms cancellation; the reservation status updates to CANCELLED .	Client	F9
S4.5	Client scrolls to the past visits section and finds a completed reservation without a review.	Client	F9, F10
S4.6	Client clicks <i>Write a Review</i> , selects a star rating, types a comment, and submits.	Client	F10
S4.7	The review is published on the venue public profile.	Client	F10

S5 — Admin Onboards a New Venue

Actor: Admin **Goal:** Register as an admin and configure a new venue from scratch to unlock the full admin panel.

Step	Description	Role	Features
S5.1	New user registers via the authentication page and is redirected to the onboarding wizard (no venue exists yet).	Admin	F1, F11

S5.2	Admin enters the venue name and basic identity details (location, type, description).	Admin	F11
S5.3	Admin creates the first environment by providing a name and icon, completing the minimum onboarding requirement.	Admin	F11, F13
S5.4	Admin is redirected to the floor plan builder to begin laying out tables.	Admin	F13
S5.5	Admin adds table elements to the canvas, sets their labels and capacities, and saves the floor plan.	Admin	F13
S5.6	Admin navigates to the admin dashboard, which is now fully accessible.	Admin	F12

S6 — Admin Configures the Venue for Operations

Actor: Admin **Goal:** Populate the menu, configure venue identity, and generate QR codes before opening.

Step	Description	Role	Features
S6.1	Admin opens the menu management page from the admin sidebar.	Admin	F14
S6.2	Admin adds multiple menu items across categories (starters, mains, desserts, drinks), filling in name, price, description, allergens, and tags.	Admin	F14
S6.3	Admin assigns some items to specific environments only.	Admin	F14
S6.4	Admin opens the venue settings page and updates the tagline, ambience tags, dress code, gallery photos, and opening hours.	Admin	F18
S6.5	Admin opens the QR code generator, selects an environment, and downloads the QR codes for all tables.	Admin	F17
S6.6	Admin navigates to guest reviews management and hides an inappropriate review.	Admin	F16

S7 — Staff Handles an Evening Shift

Actor: Staff **Goal:** Run floor operations: check in booked guests, handle a walk-in, and acknowledge a waiter call.

Step	Description	Role	Features
S7.1	Staff logs in and opens the staff operations dashboard.	Staff	F1, F19
S7.2	Staff selects the current date and the active environment to load the live floor map.	Staff	F19
S7.3	A guest with a confirmed reservation arrives; staff clicks their table on the floor map and selects <i>Check In</i> . Status changes to <code>CHECKED_IN</code> .	Staff	F19
S7.4	A second table's reservation guest does not arrive; staff marks the table as <i>No-Show</i> . Status changes to <code>NO_SHOW</code> .	Staff	F19
S7.5	A walk-in party of two arrives; staff clicks <i>Walk-In Guest</i> , fills in basic details, and a reservation is created instantly with status <code>CHECKED_IN</code> .	Staff	F19
S7.6	A table indicator pulses gold on the floor map indicating a waiter call; staff clicks <i>Acknowledge</i> to dismiss it.	Staff	F20
S7.7	At end of service, staff marks all remaining occupied tables as <i>Checked Out</i> . Statuses change to <code>COMPLETED</code> .	Staff	F19

S8 — Admin Rejects a Reservation

Actor: Admin and Client **Goal:** Admin rejects an unsuitable request; client is notified and prompted to rebook.

Step	Description	Role	Features
S8.1	Admin opens the reservation queue and locates a pending request that cannot be accommodated.	Admin	F15
S8.2	Admin clicks <i>Reject</i> ; a confirmation dialog appears.	Admin	F15
S8.3	Admin confirms; the reservation status changes to <code>REJECTED</code> and a log entry is created.	Admin	F15

S8.4	The client's awaiting screen detects the rejection via the storage event and displays a graceful decline card.	Client	F8
S8.5	Client clicks <i>Try Again</i> ; the booking flow restarts from environment selection with the same venue pre-selected.	Client	F8, F5

Phase 2 Scenarios — AI Features

S9 — Client Books via Voice Command

Actor: Client **Goal:** Use the AI voice booking feature to pre-fill a reservation form by speaking naturally.

Step	Description	Role	Features
S9.1	Logged-in client sees the <i>Voice Booking</i> section on the home page and taps the microphone button.	Client	F21
S9.2	The button animates to indicate listening; client speaks: “ <i>Book a table for two at Noir for Friday evening.</i> ”	Client	F21
S9.3	The system sends the transcript to the AI along with venue data. A spinner indicates processing.	Client	F21
S9.4	AI returns extracted intent: venue, date, time, and guest count. The confirmation form is pre-filled.	Client	F21
S9.5	Client reviews the pre-filled form and clicks <i>Submit Reservation</i> .	Client	F7
S9.6	Client is redirected to the awaiting screen.	Client	F8

S10 — Client Discovers Venues via Natural Language Description

Actor: Client **Goal:** Use the AI semantic discovery mode to find a venue that matches a described atmosphere.

Step	Description	Role	Features
S10.1	Client opens the home page and switches the discovery toggle from <i>Search</i> to <i>Describe</i> .	Client	F22
S10.2	Client types: “ <i>Somewhere dark and intimate for a first date, ideally with live jazz.</i> ”	Client	F22

S10.3	Client clicks <i>Find Matches</i> ; venue cards are replaced with loading skeletons while the AI processes.	Client	F22
S10.4	AI returns a ranked list of venues. Cards reappear in ranked order, each with a gold badge showing the AI's match reason.	Client	F22, F2
S10.5	Client selects the top match and opens its public profile.	Client	F3
S10.6	Client starts the booking flow from the venue profile.	Client	F5

S11 — Admin Generates AI Insights About Reservation Patterns

Actor: Admin	Goal: Use the AI insights card to understand booking trends and act on them.
---------------------	---

Step	Description	Role	Features
S11.1	Admin opens the admin dashboard.	Admin	F12
S11.2	Admin scrolls to the <i>AI Insights</i> card and clicks <i>Generate</i> . Skeleton rows appear while the AI processes.	Admin	F23
S11.3	The system aggregates the last 30 days of reservation data (totals, no-show rate, peak hours, day-of-week distribution) and sends it to the AI.	Admin	F23
S11.4	AI returns 3–5 actionable observations, each with an icon and severity level. The card displays them as a list.	Admin	F23
S11.5	Admin reads an insight flagging a high Friday no-show rate and decides to send reminder messages before future Friday reservations.	Admin	F23
